

Spreading the Cost of the Equipment

We have put together some cost effective bundles (As shown earlier). To help with the budget cost we have outlined some suggestions here, which may also be helpful.

Purchase equipment between 2 or more schools ...

There is the possibility of purchasing equipment between local schools in an area and scheduling the use between themselves throughout the calendar year.

Your Schools Teams can use equipment for testing during the season

All the Testing Equipment here can also be used with your Schools teams for Measurement and Assessment at intervals during the year to help guide their training programs.

This way the cost of the Equipment could possibly be spread across the PE and Sports Team Budget. This could also allow your PE students get access to teams to test/ measure and become proficient with the equipment.

Equipment Rental ...

We will have a limited number of Systems available for Rental in year one of the program to allow schools familiarise with the system.

Compatibility of Equipment ...

As discussed earlier, the more technical equipment such as speed gates and jump sensors are APP based, so are compatible with the iPad or Tablet students may already have. Hence there is no need for additional purchases.

Finance Available ...

Finance is available on all our products which allows you to spread the cost over an extended period instead of a once off payment. There is up to €25k pre-approved finance available for schools through our finance partner.

Program Expansion Opportunities

Polar, Dashr and VERT have the capacity to be expanded year on year. Extra Speed Gates can be added to the Dashr to allow further measurements such as interval times. Also have the option to subscribe to each system, which will allow you more compatibility to keep track & analyse group data and prepare reports. Being APP based, all are continually upgraded to give more functionality.

For more details on how this could be expanded year on year or to request a visit to the school to discuss this or demonstrate any of the equipment please Contact us.
